

Renewable and Energy Saving

Company Profile

The Italian technology, developed with the combined use of renewable energies, allows you to create stand-alone systems to fully self supply, for ideal remote rural areas, with the available energy such as sun and wind.

- SMALL HYBRID PLANTS FOR THE PRODUCTION OF ENERGY FROM 25 TO 500KW FROM RENEWABLE SOURCES INTEGRATED WITH GENSET.

Energy's production from integrated (photo-voltaic and wind production, hydroelectric and diesel) renewable sources. Connectable fittings online, or stand-alone, endowed with batteries to guarantee the electric continuity of load managed with different priorities.

- SMALL AUTONOMOUS PLANT STAND-ALONE FOR POWER, WATER, LIGHT DEVICES

They supply autonomous power to electrical uses in rural and peripheral sites, everywhere, do not exist the public electric grid.

Available also kits for reading photo-voltaic for the consumption of small domestic plants connected to the electric grid or stand application.
